Inventors protection process

Intended to bridge the dichotomy of protecting inventors interests vs getting their products connected to the people.

- **Copyright © + DATE:** this moves the jurisdiction in to Common Law (criminal offences of theft and vandalism for which people including executives are personally liable). It is far cheaper and far more effective than Patents. The following proprietary process is extremely thorough and well proven, I would be happy to introduce you or any colleagues. The people and the process are extremely impressive and they independently value your IP in case fo future claims and will negotiate with interlopers advising them of their legal position (whilst also getting them to incriminate themselves). The company who provide the service are here: <http://www.sosinvention.com/>

- **Trust:** Put the IP in to a Trust, this moves the jurisdiction in to a higher law form known as equity. One of the maxims of Equity is that "equity will not allow statutes to be used as a cloak for fraud", also where there is a multiplicity of jurisdictions: "Equity will take jurisdiction to avoid a multiplicity of suits". It is extremely simple and equally powerful and I have personal experiences of using it. Trusts are the favourite asset protection vehicle of the rich and famous. I would add on special purpose vehicles - LLC, Foundation, etc. to separate out licensing and production, governed by contracts, which creates a collapsible chain that is extremely hard to attack, especially if multiple offshore jurisdictions are employed with the Trust at the end. At the very least simply Copyright all documents and state that they belong to a Trust – name it how you like, it does not matter, however this puts your claim to be working in Equity in writing... indisputable.

- **Open sourcing:** An inventor or small team sitting on paradigm changing technology is far more vulnerable if they are the only ones holding the keys. Attacking an inventor once the invention is out is taking a huge risk with very little to gain.

- **Commercial Licence:** can be added to dictate terms in a Contract through offer and acceptance. This can be used to apply your own terms

to penalise corporate encroachment, including a percentage plus fixed fees, or whatever you want – it's your property, your contract, your terms... please see the **Trust and Equity Summary** document.

NB This also means you can set different terms for different sizes of companies / organisations... meaning you can potentially get hundreds of co-developers, co-manufacturers and co-seller / distributors worldwide – a whole multi-country manufacturing and sales network on commission... for zero cost.

- **Donations:** we know Crowd Funding works to one extent or another, and so do honesty boxes. It therefore seems to make sense that giving away technology to private individuals (for example) should also be accompanied by a Donate button – this complies with the Universal law of a return of energy. By having donations instead of a fixed fee we are excluding no-one on financial or economic grounds, this means there is no barrier to adoption through any artificial barrier we create.

START POINT

Simply put:

© (e.g. **The Intentional Trust**), 2014, All Rights Reserved

on each page of your documents **NOW**... this is all you need to do initially. Change the wording in **red** to reflect your own Trust.

Conscious currency linkage

If inventors can sell their technologies to people, especially communities (eco, spiritual, conscious, tribal) and money is less of an issue they get a large market, international demo, sales and distribution network – see the Conscious Currency Creation document.
